6cm Source

Our smallest ion beam source, the 6cm RF can provide all the benefits of radio frequency ion source technology in a smaller, more compact, and less expensive form. With a maximum beam current of 200mA at 1500V, the 6cm source is ideal for research and smaller production systems.

This source also finds a home in etch and ion beam figuring (IBF) systems with its highly divergent or highly convergent grid options. The body of this source is not water-cooled, thus requiring only two feedthroughs — RF power and DC Bias/Gas. Designed around the flexibility of internal mounting, the 6cm source is also capable of being mounted directly to a flange for process flexibility. As with all RF sources, the 6cm source can be run with both inert and reactive gases, making the 6cm ideal for any ion beam process.

SPECIFICATIONS

Model	06RF
Beam Current	25 – 200mA
Beam Voltage	50 – 1500eV
Grid Materials	Molybdenum
Water Cooling	Antenna Only
Weight	3.6 kg (8 lbs.)

Flange Mount

FLANGE MOUNT

The Flange Mount configuration for this ion source places the body of the ion source directly against the vacuum flange. This option uses the smallest amount of space in the vacuum chamber and offers fixed positioning for highly-repeatable operation. The minimum flange size for this configuration is a 10-inch Conflat. This package includes a high-voltage cover on the atmosphere side of the flange to which the RF Matching Network mounts directly. Connection points for the RF antenna cooling water, source gas, and source DC bias are also provided.

Internal Mount

INTERNAL MOUNT

Using an Internal Mount configuration places the ion source loosely inside the vacuum chamber, allowing angular (pointing) adjustment to suit process needs. The maximum distance from the RF vacuum feedthrough for this configuration is 18-inches. This option allows some freedom of location of the ion source and the ability to use multiple smaller feedthroughs instead of one large feedthrough. The standard flanges for this configuration are two 2.75 inch Conflat. Other flange combinations are available. The RF Matching Network mounts directly to the RF feedthrough.

OPTIONS & ACCESSORIES

Ion Source	06RF	Standard Ion Source	200mA / 1500V Limits
Interface Kits	505865A	Flange Mount	Includes Vacuum Feedthroughs and vacuum-side connections to source for RF Power, DC bias, and gas
	505864A	Internal Mount	
Neutralizer	504424B	RFN	Radio frequency - requires a mounting flange
Common Neutralizer Flanges	504854A	2¾" CF RFN Flange	Each flange has a RFN matching network.
	504891A	4.5" CF RFN Flange	
	504855A	6" CF RFN Flange	
Power Supply	IBEAM 703-1 series		RF Power, DC Bias, Control, and RFN Operation
RF Matching	505914A	Source RF	Includes Matching Network & Controller for source
Cable Kit	505752A	I-Beam 703 Cable Kit with beam, RFN and RF cables	
Adapter Box	IBOX-104	Adapts connections to an Ion-Tech style configuration	

GRID OPTIONS

25cm FP, Convergent	505837A	Molybdenum	3-grid, 25cm FP, Convergent	Sputter deposit
25cm FP, Divergent	505834A	Molybdenum	3-grid, 25cm FP, Divergent	Assist
Collimated	507186A	Graphite	3-grid, Graphite Collimated	Etch

12cm Source

Used primarily for ion assist, the 12cm RF ion beam source also finds great value as a deposition source in smaller systems or an ion beam figuring (IBF) source for large substrates. Providing additional service as a pre-clean source for substrates, the 12cm source is one of the most versatile options available. As with all RF ion sources from Plasma Process Group, the 12cm can run on almost any process gas, including inert species such as argon and xenon, and reactive species like O₂, N₂, CH₃, and many more. Capable of outputs as high as 400mA at 1500eV, this source is also stable at more common assist conditions like 200mA at 250V. The 12cm source provides a 12cm ion beam that is shaped by the choice of grids. Available with molybdenum convergent or divergent grids with several possible focal points, or collimated graphite, the 12cm beam can be optimized for almost any process. Please refer to the grid selection table below.

SPECIFICATIONS

Model	12RF08
Beam Current	50 – 400mA
Beam Voltage	50 – 1500eV
Grid Materials	Molybdenum, Graphite
Water Cooling	Antenna and Shroud
Weight	6.8 kg (15 lbs.)

FLANGE MOUNT ▶

The Flange Mount configuration for this ion source places the body of the ion source directly against the vacuum flange. This option uses the smallest amount of space in the vacuum chamber and offers fixed positioning for highly-repeatable operation. The minimum flange size for this configuration is a 14-inch Conflat. This package includes a high-voltage cover on the atmosphere side of the flange to which the RF Matching Network mounts directly. Also provided: connection points for the cooling water, source gas, & source DC bias.

16cm Source

Our 16cm RF ion beam source is an industry workhorse, serving as the dominant deposition source in ion beam deposition (IBD) systems around the world. With an output capacity of 600mA, 800mA, or even 1000mA this dynamic and versatile source can satisfy a huge array of needs in deposition and large-scale Ion assist processes. Available with standard molybdenum, collimated graphite, or titanium grids, this source can be used in almost any type of contamination-sensitive ion beam process. This 16cm source can even be equipped with modulators allowing it to be used in metal deposition and etch processes, an operational regime normally challenging for RF ion beam. The source provides a 16cm ion beam which is then shaped by the choice of grids. Convergent, divergent, collimated, and even multi-focal point grids are available with this source. Please refer to the grid selection table below.

FLANGE/EXTENSION MOUNT

The Flange and Extension Mount options for this ion source offer fixed positioning for maximum process repeatability. The Flange Mount places the source directly against the flange using the smallest amount of space, while the Extension Mount stands off the flange with fixed posts. The minimum flange size for these options is a 16.5-inch Conflat. These packages include a high-voltage cover on the atmosphere side of the flange to which the RF Matching Network mounts directly. Also provided are connection points for cooling water, source gas, and DC bias.

23cm Source

We offer a 23cm RF ion beam source for larger area, high current processes. This RF source is ideal for etch or assist applications. The 23cm ion source is typically used in production environments. Using RF discharge (no filaments) minimizes maintenance requirements, and enables use with typical process gases including many reactive species. Molybdenum grids are available for this ion source in a couple of configurations. The 23cm ion source is typically internal-mounted, but flange mounting is available. Every ion beam installation is unique so we are ready to help meet the requirements of your specific application.

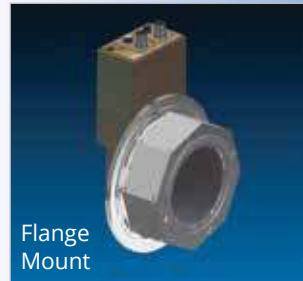

SPECIFICATIONS

Model	23RF
Beam Current	200 – 1500 mA
Beam Voltage	100 – 1250 eV
Grid Material	Molybdenum
Water Cooling	Antenna Only
Weight	22 Kg (48 lbs)

FLANGE MOUNT ▶

In the Flange Mount configuration the ion source is fixed directly to the vacuum flange, providing the maximum level of process repeatability. This ion source requires an ISO400 flange or larger, and uses the least space inside the vacuum chamber. Flange Mount packages include a high-voltage protective cover on the atmosphere side of the flange, to which the RF Matching Network mounts directly. Also provided are the connection points for antenna cooling water, source gas, and DC bias.

INTERNAL MOUNT ▲

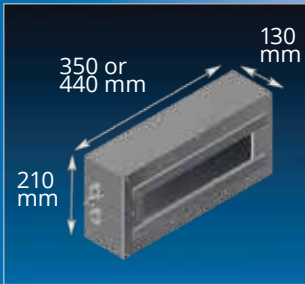

The Internal Mount configuration places the ion source loosely inside the vacuum chamber allowing angular (pointing) adjustment to suit process needs. The maximum distance from the vacuum feedthrough is 18-inches. This option allows some freedom of location of the ion source, and provides the ability to adjust the tilt for specific chambers. It also allows the use of multiple smaller feedthroughs instead of one large feedthrough. The standard flanges for this configuration are two 2.75 inch Conflat. Other flange combinations are available. The RF Matching Network mounts directly to the RF feedthrough.

RF Linear Sources

Our Linear ion beam sources are useful for in-line applications such as roll-to-roll or web coaters. The 6x30cm RF ion beam source can be equipped with either 6x30cm collimated graphite grids or 6x22cm shaped molybdenum grids, allowing greater process flexibility with a single ion source. Additionally, the gas, RF antenna cooling water, and DC connections have been placed on the side of the ion source instead of the rear giving the ion source more placement flexibility inside the chamber. We also offers a standard 6x22cm ion source with most of the same benefits, but constrained to 6x22cm molybdenum grids.

As with all RF ion sources, these can be run with both inert and reactive gases allowing a huge range of processes. With a maximum of 500mA and 1500V, these linear ion sources can handle both high-rate, high-throughput and precision assist or etch operations.

SPECIFICATIONS

Model	06X30RF 06X22RF
Beam Current	50 – 500mA
Beam Voltage	50 – 1500eV
Grid Materials	Molybdenum, Graphite
Water Cooling	Antenna Only
Weight	11.9 kg (26.5 lbs.)

INTERNAL MOUNT ▲

Plasma Process Group RF Linear ion sources are typically installed with an Internal Mount configuration. The maximum distance from the RF vacuum feedthrough is 18-inches. The standard flanges for this configuration are two 2.75 inch Conflat. Other flange combinations are available. The RF Matching Network mounts directly to the RF feedthrough.

I-Beam Power Supplies

Integrating all RF, DC, and RFN power and control into a single 19-inch rack mount unit, the I-Beam 700 series Power Supply was a revolution when it was first released in 2009. The oldest unit, the I-Beam 701, has a long history and is still used in systems where a separate RF generator is required. The I-Beam 703, which has its own RF generator, has become the standard in the field for performance, quality, and backward compatibility. We have designed these power providing workhorses as drop-in replacements for aging Ion Tech RF2000-series supplies. The I-Beam series has rugged output capabilities while using the same communications protocols and connectors, and can therefore keep older systems running.

The I-Beam 703 is also capable of meeting the newest system requirements, offering a standard 600mA configuration, an 800mA option when paired with a Plasma Process Group ion source, and even a 1000mA version that uses a separate RF Generator.

The I-Beam 702 offers stand-alone RF Neutralization for any system using an ion source. This option allows the elimination of the filament or hollow-cathode based neutralizers, making the incredibly low-maintenance, high-performance capabilities of the RFN available.

All four supplies are equipped with front panel keypads for direct user control with large, easy-to-read LED displays. Three modes allow convenient control access, with "Manual" providing full RF power control, "Local" allowing direct beam current control, and "Remote" locking the front panel to prevent accidental changes during process. Communication using RS-232 allows full computer control, while the power supply can alternatively trigger with remote switches.

SPECIFICATIONS

Power Outputs <i>Six individual supplies to run an RF ion beam source with an RF Neutralizer</i>	Beam Supply	1500VDC, 600mA – 1500mA	I-Beam 701, 703, 704

Plasma Process Group

Since its founding in 2003, Plasma Process Group has consistently provided the highest quality service and equipment to the ion beam industry. We offer innovative new designs and industry standard products compatible with legacy equipment.

EQUIPMENT

We provide a wide array of ion beam products ranging from turnkey sputter coating systems through stand alone ion beam source and power supply packages. We offer a production tool, called *Techne*, that produces high quality optical thin films using ion beam assisted deposition (IBAD) processes. The ion beam sources we offer include both radio frequency RF and filament-driven DC styles. Our I-BEAM Power Supply family provides reliable operation for the most demanding production environments. Our ion beam grid assemblies, or ion optics, are constructed from molybdenum, graphite, or titanium and are available in a variety of shapes and sizes. We also carry a healthy assortment of spare parts including discharge chambers, insulators and many other items to keep your source running.

CUSTOMER SERVICE & SUPPORT

Whether in research or production, Plasma Process Group is committed to providing the best support in the industry. Help is always just a call or email away. Our staff has decades of hands on experience using ion beam sources and sputter deposition systems. We are happy to share our expertise and assist you with your application. New ideas can be tested in our Applications Laboratory equipped with a *Techne* coating system.
